

Wilken Angus

Your connection to... Proven, Profitable Genetics

Black Friday Fall Sale

**Friday,
November 24, 2017
1:00 PM MST
Faith Livestock Auction
Faith, SD**

Wilken Angus

Vision Statement:

We desire to equip our customers with the most profitable seed stock in the industry, through exclusive use of high accuracy AI genetics and rigorous culling of our cow herd. Our goals of consistent calving ease, maternal easy fleshing females, and moderate to high growth cattle with positive carcass qualities are in place to ultimately serve our customers with success through every cattle cycle.

Sale Day & Time:

Friday, November 24, 2017 -- 1 p.m. MDT

Sale Location & Sale Day Telephone:

Faith Livestock Auction -- 605-967-2200

Dace Harper -- 605-515-1535

Mason Dietterle -- 605-580-5878

Auctioneer:

Doug Dietterle -- 605-788-2963

Delivery & Wintering:

Bulls will be delivered free of charge up to 200 miles or deduct \$100 per head if you haul them home on sale day. We are offering free wintering of your bulls this year or if you take them home sale day deduct \$400 from the price of the bull.

Semen Testing and Ultrasound Data

The bulls were fertility tested and scrotal measured by Dr. Ethan Andress. The bulls were ultrasound tested by Dan Hines of Old West Ultrasound.

Guarantee:

Wilken Angus guarantees all bulls against any injury that would keep them from being a breeder for the first breeding season. If a problem occurs, return the bull and a full credit will be given toward next year's bull sale, or a suitable replacement will be provided if available. The buyer will choose the preferred option. All claims must be made by 10/15/18.

Genetic Testing:

All known potential carriers of CA, NH, and AM have been tested and all bulls selling are free of CA, NH, and AM.

Sale Day Reps:

Dan Piroutek, Tri-State Livestock News, 605-544-3316

Beau Bendigo, Cattle Business Weekly, 605-515-3223

Scott Dirk, Tri-State Livestock News, 605-380-6024

Mason Dietterle, 605-580-58787

Lunch:

Complimentary lunch beginning at 11:00 a.m.

Volume Discounts:

Buy three bulls- 3% discount; four bulls- 4%; 5 bulls- 5%; on up to a maximum of 10 bulls-10% discount.

Zoetis i50K Genetic Testing:

We are pleased again this year to have the Zoetis i50K testing. i50K testing uses a sample of each of our bull's DNA to determine their genetic potential. The bulls selling have been sire verified through the i50K genetic testing. See page 22 for more information on i50K genetic testing information provided.

Individual Docility Score:

We have instituted a docility score that is specific to our bulls. This is NOT AN MVP. It is a subjective score derived from our personal evaluation of each bull. A bull would have to be rated 1-3 in order to qualify for our sale.

- 1 - Extremely Gentle
- 2 - Docile
- 3 - Restless
- 4 - Flighty
- 5 - Agressive
- 6 - Very Agressive.

Welcome to our Annual Fall Production Sale.

Thank you for taking the time to look at our 2017 fall offering. We are grateful for each and every one of you who have supported us throughout the years.

The 2017 Fall Sale offering includes 75 powerful first time offered virgin, coming two year old bulls all out of high accuracy AI genetics. These bulls all sell as commercial bulls to the best commercial cattlemen in the world.

The bulls in our two year old program were back grounded to go to grass which sustained them until pastures were depleted, at which time they were put on a practical growing ration. These bulls were developed slowly -- end result is a more durable potent bull.

To serve you , we offer i50K test results on each bull, complete performance data, breeding season guarantee, and individual docility scores. New this fall, we are offering free wintering of the bulls due to the dry summer and feed shortages.

Our family looks forward to seeing you, our friends and customers, and serving you a complimentary lunch at 11:00 am on FRIDAY, November 24, 2017. Sale starts at 1 pm MDT at Faith Livestock

OCC Emblazon 854E is a highly proven sire that has become very popular with his ability to have a high weaning value and at the same time save cost. The Emblazon daughters are easy fleshing, moderate framed, and very productive.

MPPA

Most Probable Producing Ability

You will see the Dam's MPPA listed on some of the bulls throughout the catalog. The MPPA is a performance ratio by which you reliably can compare a dam's past production.

Capitalist is a highly proven bull that has the ability to transmit mass and body width with as much muscle as you can ask for. He is a calving ease sire who does not disappoint in terms of muscle and performance-a rare combination. His daughters have a reputation of having perfect udders and raising heavy calves.

Ten X/Capitalist sons

Emblazon Son with good looking hip and hard to fault. Zoetis 50K: Top 7% calving ease direct; Top 4% yearling weight. Recommended for heifers.

Dean LaDue has always been a great source of support, encouragement, and wisdom to our family. Dean supported our very first sale in Pierre and his ideas were instrumental in our decision to launch our fall sale of coming two year old bulls. Dean was a man of God. He will be missed.

We had the opportunity to see Payweight 1682 in Billings, MT. He has a powerfully impressive phenotype and has an outcross pedigree. His EPDs are equally impressive with top 10% values for \$ weaning and \$feedlot and to 15% for \$beef. When we selected our replacement heifers, the Payweight daughters were the keeping kind. In the ABS Sire Alliance test, Payweight ranked in the top 2% reduced feed intake, top 5% profit index, and top 2% for maternal index.

Zoetis i50K Testing Reference Page

What are MVPs?

MVPs or Molecular Value Prediction are the predicted genomic breeding values for animals, based on the sum of the effects of the associated markers, expressed in units of measure for the trait. Similar to EPDs, MVPs rank animals for genetic merit and are expressed as deviations in performance from a set base-point for each trait. One-half of the difference in genomic breeding values between animals is transmitted to offspring.

What are Percentile Rankings (%)?

Percent ranks are based on the animal's MVP for each trait as compared to the overall population of Black and Red Angus animals in the Pfizer global database. Lower percentage values generally indicate higher and more favorable genetic merit for most traits.

Calving Ease Direct

Describes differences in genetic merit for the likelihood of unassisted births in first-calf heifers, expressed as a trait of the progeny. Higher MVP values and lower percentages are preferred, especially when selecting sires for use on replacement heifers for easier calving progeny.

Birth Weight (BW)

Quantifies genetic differences in birth weight, with lower and moderate MVP values and percentages generally desired for ease of calving.

Weaning Weight (WW)

Measures difference in genetic merit for adjusted 205-day weaning weight, with higher MVP and lower percentages indicating heavier weights.

Yearling Weight (YW)

Indicates differences in breeding value for adjusted 365-day weight, with higher MVPs and lower percentages equating to genetics for heavier yearling weights.

Milking Ability (MILK)

Evaluates differences in genetic merit for the maternal component of calf weaning weight, predominantly due to milking ability of dams (or daughters). Genetic potential for milking ability should be matched to available feed resources, which implies that intermediate MVP and percentages are likely optimum for many production systems.

Scrotal Circumference (SC)

Describes genetic differences in age at puberty as indicated by adjusted yearling scrotal circumference. Larger MVPs and lower percentages for scrotal circumference equate to genetics for earlier and more desirable age at puberty in both bulls and heifers.

Marbling Score (MARB)

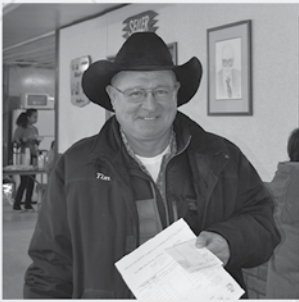

Quantifies genetic differences in USDA marbling scores at a constant age, with higher MVPs and lower percentages indicating higher levels of marbling and generally more desirable quality grades and associated carcass premiums.

Ribeye Area (REA)

Describes genetic variation in carcass muscularity as measured by ribeye area between the 12th and 13th rib, at a constant age. Larger MVPs and lower percentages for ribeye area favorably impact USDA yield grades and associated carcass premiums.

Molecular Value Prediction - Feedlot Index (\$MVPFL)

Predicts net return from combined genetic merit for feedlot (FL) gain, dry matter intake, carcass weight, as well as USDA quality and yield grades (marbling, ribeye area and fat thickness). The index assumes approximately 160 days on feed consuming concentrate rations and carcass value derived from a Certified Angus Beef (CAB) grid. Higher MVPs and lower percentages indicate more desirable combined genetic merit.
